TYPE OF CONTRACT

JCT Design and Build 2011

CONTRACT VALUE £2.7m

PROJECT DURATION

April 2013 – March 2014

Client Testimonial

"This overcladding project transformed a dated 1950's building into a modern energy-efficient building with Phase I being completed in a remarkable twenty week period. The project included an additional layer of insulation to the outer building, prior to the installation of the cladding, modern double glazed units complete with new internal window finishes that have significantly improved the internal environment. d+b facades, with their can do attitude, have made the process as trouble free as possible, ensuring that the project has been achieved with minimum disruption, whilst the building remained fully operational."

Ken Roberts, Executive Director of Resources

PROJECT SCOPE

Insulated aluminium rainscreen overcladding, replacement windows and single ply over-roofing. Additional works included refurbishment of spiral staircases, two areas of new curtain walling, replacement of entrances, refurbishment of main doors and over-spraying of the main doors, refectory curtain wall frames and posts supporting the refectory roof to complement the new overcladding colour scheme. As part of this comprehensive refurbishment project the fenestration was reduced, notably the large windows on the upper floors.

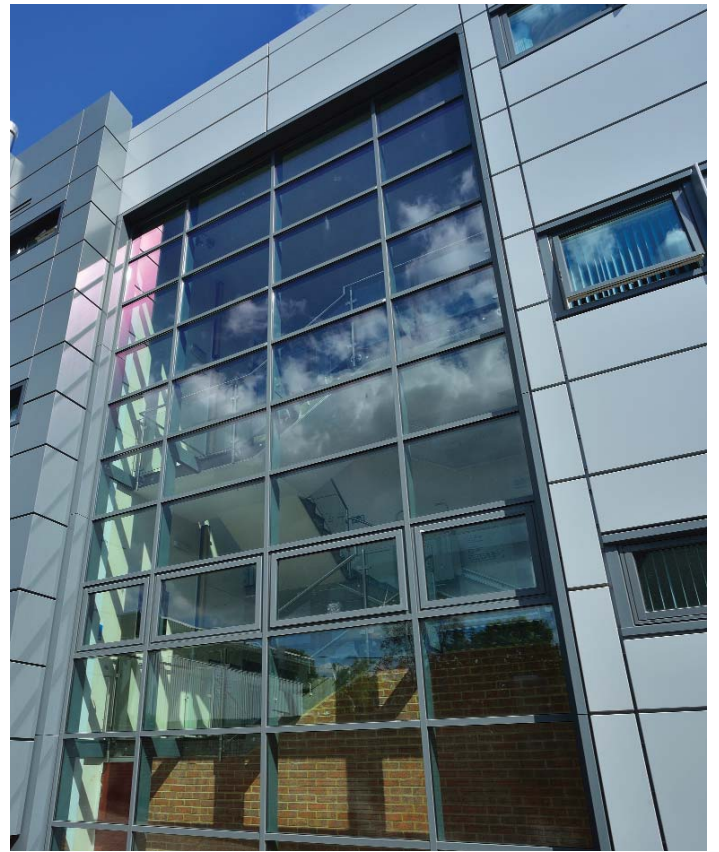

The Bournemouth & Poole College, North Road Campus

The College has demolished the adjacent low level temporary accommodation as part of a new-build project. In order to facilitate the new building's eventual connection to the existing, a vertical channel has been left within the overcladding.
