TYPE OF CONTRACT

JCT Design and Build Rev 2009

CONTRACT VALUE £1.98m

PROJECT DURATION

July 2014 – August 2015

PROJECT SCOPE

Insulated aluminium rainscreen overcladding and high-performance replacement windows to five blocks with other overcladding systems including Kingspan installed to Block E. Additional works included curtain walling. Access to some elevations was challenging because of the requirement to bridge an enclosed walkway which could not be obstructed. The project was secured under the iESE (Improvement and Efficiency South East) Framework by Bouygues. iESE is an OJEU-compliant procurement Framework available to public bodies in the South East and London areas saving clients time and money.

"The transformation of Fareham College's 13,000m² campus involved the recladding and internal refurbishment of over 8,000m² of tired 1960's buildings. Together with the design team led by Perkins Ogden and the main contractor, Bouygues UK, the d+b team played a key role in changing the facades of the buildings beyond recognition. With careful detailing to the cladding to complement the 2000m² new build we now have a stunning new courtyard of learning zones which has exceeded expectations."

Peter Marsh, Director, Peter Marsh Consulting Ltd, Client Side Project Advisors and Director of Capital Projects at Fareham College
